Tree Growth Regulators
Changing the way you manage trees.

- Helps prevent outages
- Improves service reliability
- Extends the effective life of line clearing activities
- Improves public relations in an increasingly competitive market
- Improves tree health
Tree Growth Regulators from Osmose: good for utilities, property owners, trees, and the environment.

Good for utilities.
Proper use of Tree Growth Regulators can benefit you in the following ways:

- Prevent outages and improve service reliability.
- Extend the effective life of line clearing activities.
- Trimmed and treated trees will require trimming less often and require less work when they do need re-trimming.
- Reduce the expense of trimming fast-growing trees. By treating them, you spread the expense over a longer time period, giving you a lower cost per tree per year. It also insures you against a problem tree population.
- Bring “cycle buster” or “hot spot” trees under control as a priority in times of budget reductions.

Good for property owners.
Property owners benefit from using Tree Growth Regulators, too:

- Improved service reliability for the individual customer and surrounding neighborhood.
- Treated trees will need to be trimmed less frequently, and when they do need it, will require less trimming.

Good for the environment.
Treating with Tree Growth Regulators can reduce biomass waste as much as 75%. There’s less tree to trim, less time to clean up the results, and fewer trips to the landfill to dispose of chips. (And that can be another important public relations message.)

Why choose Osmose for this service?

- Comprehensive service coupled with extensive field experience.
- Industry leader in performance and completion of contracts.
- Integrity, Quality, Economy, Accountability.
- Partnership with Dow AgroSciences, manufacturers of Profile 2SC, the product of choice among Tree Growth Regulators.

Good for trees.
According to recently published research data from Purdue University and the Journal of Arboriculture, the use of Tree Growth Regulators:

a) Improves the efficiency of water usage in the tree which equates to more drought resistance
b) Increases resistance to wood decay
c) Is effective in improving tree root health

Good for customer relations.
You can improve public relations in an increasingly competitive market. Demonstrate to the consumer that your utility is utilizing “state of the art” technology to increase service reliability, lower costs, and improve tree care practices.
